FOREIGN CROPS AND MARKETS.

ISSUED WEEKLY BY THE BUREAU OF AGRICULTURAL ECONOMICS,
UNITED STATES DEPARTMENT OF AGRICULTURE, WASHINGTON, D.C.

VOLUME 8.

JANUARY 9, 1924.

NO. 2.

CROP PROSPECTS.

SUGAR.

The supply of sugar for the 1923-24 campaign probably will not be greatly different from last year. Cane sugar production in the United States, Cuba, Java, and Brazil is now forecasted at 7,066,000 short tons compared with 6,798,000 tons last year, or an increase of about 4 per cent. These countries produced nearly 47 per cent of the total cane sugar crop reported for the 1922-23 campaign. There could be, of course, a radical change in comparison with last year when reports are received from other producing regions.

Reports from 4 European countries and the United States indicate a beet sugar production about the same as last year. The total of these reports is 3,445,000 short tons compared with 3,463,000 short tons last year. These countries produce more than 50 per cent of the total beet sugar crop.

The sugar beet production of 15 countries representing more than 90 per cent of the total production is estimated at 39,376,000 short tons compared with 39,354,000 tons last year. This indicates that beet sugar production will be about the same as last year.

FLAXSEED.

India - first forecast of flaxseed acreage is placed at 2,575,000 acres compared with 2,290,000 acres last year. The final estimate of last years acreage was 3,358,000.

CORN.

Estimates from 16 countries now total 3,581,376,000 bushels compared with 3,341,282,000 bushels last year, or an increase of about 7 per cent. These 16 countries produced 86 per cent of the crop reported in 1922.

Foreign Crops and Markets.

PRODUCTION OF CORN FOR COUNTRIES REPORTING 1922 AND 1923.

CUBAN SUGAR PRODUCTION.

The Cuban sugar production for the 1923-24 campaign, as estimated by H. A. Himely of Havana, Cuba, is 4,271,000 short tons compared with his final estimate of 4,034,000 short tons for the 1922-23 crop year.

Grinding of the new crop began December 10 under favorable weather conditions; the 1922-23 campaign began November 27, 1922, and the 1921-22 season on November 30, 1921. On December 22, 1923, there were 49 centrals at work as compared with 46 centrals at the same date in 1922 and 19 in 1921. The total output of all centrals grinding up to December 22 was 12,318 short tons, while at the same date in 1922 the total outturn was 52,000 short tons and in 1921, 10,882 short tons.

The following table shows the various estimates of the 1923-24 sugar crop compared with the preliminary and final estimates for the 1922-23 campaign. The preliminary estimates were made in December at the beginning of the campaign and the final estimates the following September.

	: Preliminary :	Final	: Preliminary

CUBAN SUGAR PRODUCTION, CONT'D

According to a statement by Willett and Gray, in the Weekly Statistical Sugar Trade Journal of December 13, 1923, the sugar stock at all ports of Cuba is estimated to be 15,884 short tons. In addition, they report 15,366 short tons on plantations and in transit to the ports, making a total stock of old crop sugar in the Island of 27,250 short tons.

The total cane sugar production reported to date from the United States, Cuba, Java, and Brazil is 7,066,000 short tons compared with 6,798,000 tons last year or an increase of nearly 4 per cent. These countries produced about 47 per cent of the total world crop last year.

SUPPLIES OF "PIGMEAT" IN THE UNITED KINGDOM.

Consumption of "pigmeat" in the United Kingdom has been gradually declining over the past twenty-two years. There was a steady decrease in the period before the war; a fairly high level of consumption from 1915 to 1918, followed by low consumption in 1920 and 1921. During the past two years, however, consumption has returned to a relatively high point.

The decline in supplies of "pigmeat" before the war was chiefly due to steadily decreasing importation. Domestic production during that time was falling only to a small extent. The situation was reversed during the war, when immense quantities of pigmeat were imported to replace depleted home supplies. By 1922, however, the United Kingdom, as a whole, had fully regained her prewar capacity of production, and for the first time since 1915, produced more than half of the pigmeat consumed in the British Isles.

Ireland is the only section of the United Kingdom producing a surplus of pork and pork products. Production was being maintained there before the war, and was returning in 1922, to a prewar status, after being greatly decreased from 1917 to 1921.

Foreign sources of supply, notably the United States, Denmark, Canada, and Netherlands, are now on a prewar basis with respect to number of hogs, according to latest available figures. This fact undoubtedly has considerable bearing upon the volume of British imports of pork and pork products during the past two years.

Although total British imports of pigmeat were declining in the decade or more preceding the war, importations of lard and bacon were showing a slight upward trend. With the outbreak of the war, increasing amounts of both these products, but particularly of bacon, were purchased abroad. The trade in hams and in chilled and frozen pork was also stimulated, but imports of fresh and salted pork dropped to negligible quantities. The trade in fresh pork has been revived, however, in post-war years. With this exception, the trend of importations in pork products has continued to follow, since 1918, the courses taken during the year.

The United States, as a source of bacon supplies, was declining prior to 1915, while Denmark and Canada were growing in importance. The war reversed the trend of trade with the United States and Denmark, but the same tendency apparent before the war is again visible, although imports of bacon from the United States during the past year have been greater than in 1922.

SUPPLIES OF "PIGMEAT" IN THE UNITED KINGDOM, CONT'D.

Since the war, the United States has continued to be the chief source from which the United Kingdom draws her hams and lard. About 18 months ago some modifications were made in the import regulations of the United Kingdom and during 1923 the United States has supplied a large share of the imports of fresh, chilled, and frozen pork, although not specifically listed as a source of importation for the first mentioned product. The trade in these products has amounted to about 20,000,000 pounds, the equivalent of over 100,000 mature hogs.

American bacon brings a lower price than any other type selling on the English market. American lard and hams, however, dominate their respective fields. The premium over American bacon commanded by bacon from other countries was relatively small before the war, but began to increase in 1915, when other supplies were curtailed. It reached a high point early in 1921 and has continued large up till the fall of the present year, although it has been steadily narrowing since the peak was reached in 1921.

(a). Figures in this tabulation are official estimates, except where otherwise indicated. They refer in some cases to numbers of hogs at the beginning or end of the year, and in most other instances are for the month of June, or months immediately before or after June. While not strictly comparable, therefore, they serve to indicate the trend of production in the respective countries.

(b). Census.

(c). Includes South Jutland, 1920 to date.

(d). Calculated average, 1913-14.
